FUEL CELL SHUTDOWN AND STARTUP USING A CATHODE RECYCLE LOOP

Examiner: Yuan S.N. 10/664,329 Art Unit: 1745 April 28, 2005

Detailed Action

- 1. The Applicant's amendment filed on April 22, 2005 was received. Claims 42-55 were canceled.
- 2. The text of those sections of Title 35, U.S.C. code not included in this action can be found in the prior Office Action issued on November 16, 2004.

Claim Rejections

3. The claim rejections under 35 U.S.C. 112, first paragraph, on claims 42-55 are withdrawn because they have been canceled.

Reasons for Allowance

4. Claims 1-41 are allowed. The prior ad does not teach or fairly suggest methods of operating a fuel cell in which fuel is introduced into an oxidant recirculation loop, the fuel is reacted with recycled oxidant until the oxidant fluid becomes substantially oxygen-depleted, and then introducing the oxygen-depleted fluid into the anode flowpath. The nearest prior art of Reiser et al. (US 6,312,842) discloses a fuel cell system which includes a cathode recycle loop (1,10) and a fuel inlet with a valve (1,16) which selectively permits anode exhaust to enter the oxidant passage (38). However, the prior art of Reiser et al. do not suggest reacting fuel introduced into the oxidant recycle loop until the recycle fluid is substantially oxygen-depleted.

Application/Control Number: 10/664,329 Page 2 of 2

Art Unit: 1745

Further, the prior art of Reiser et al. does not suggest introducing the substantially oxygendepleted fluid into anode flow path.
